Seminar-room 5.30

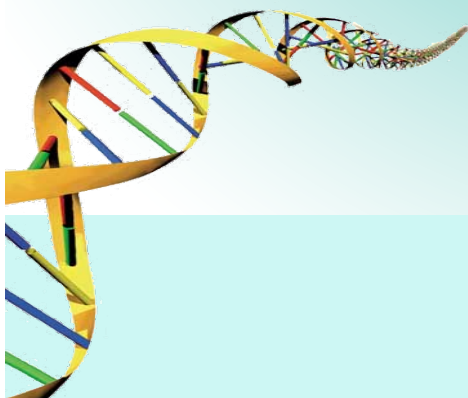

Maulbeerstrasse 66

4058 Basel

**Mitinori Saitou, Department of Anatomy and Cell Biology
Kyoto University, Japan**

**"Launching the germ cell lineage in mice in vivo and in vitro:
signaling, transcriptional regulation, and epigenetic reprogramming"**

Prof. Mitinori Saitou is renowned for his groundbreaking work in dissecting the mechanisms underlying the specification of germ cells in mammalian organisms. Besides studying genetic and epigenetic control of germ cell formation, he recently also identified a signaling principle directing germ cell fate specification.
